Femmes vs discriminations écologiques. Christina Brown arbitre le combat!

Le sujet de thèse de Christina Brown, étudiante en droit, est : Dégradation écologique et discrimination socio-économique à travers une perspective éco-féministe/Ecological Degradation and Socioeconomic Discrimination through an Ecofeminist Perspective. Ses travaux se basent sur des cas français comme nord-américains...

Focusing on France and the United States, the case studies concentrate on communities disproportionately exposed to risk industries and contaminant bi-products which diffuse into the environment, affecting habitats and both human and non-human life. The role of women in an ecofeminist dynamic emerges, compelling greater social and environmental justice. »

Ecological Degradation and Socioeconomic Discrimination through an Ecofeminist Perspective

Subject

Vulnerable communities tend to be victims of intersectional discrimination where variables such as race, ethnicity, gender, handicap and age converge, augmenting exposition to discriminatory situations. Focusing on France and the United States, the case studies concentrate on communities disproportionately exposed to risk industries and contaminant bi-products which diffuse into the air, soil and waterways affecting habitats and both human and non-human life. An ecological discrimination is considered which operates against these populations of historic discrimination and/or modest socioeconomic status though nonobstant in its reach. The role of women in an ecofeminist dynamic emerges, compelling greater social and environmental justice.

❖ Cases

France: Aulnay-sous-Bois, Vincennes, Sainte- Pazanne, Nice.
United States: Flint, Michigan, « Cancer Alley », LA, « Standing Rock » Reservation N/SD, Uniontown AL, Lawrence, MA.

Methodology: Case-law, doctrine, local and national statistics, terrain research and interviews allow for cross-fertilization and a global apprehension of the targeted cases.

Perspectives & Findings

Citizenship models (Ethno-national /Identity politics v. Republican Model/ Universalism)
Pollution Overlapping & Toxic Cocktails
Diffusion-Exposome
Class-action capacity
